Independent power to copper mines in the DRC

Master Power Technologies (MPT) has supplied two copper mines in the DRC with power generation capabilities totaling around 15 MVA. MPT's partner in the region, FG Wilson, installed the solutions and the company will continue to provide maintenance services to the mines.

Master Power was tasked with the

project after winning the tender from FG Wilson. Using P1250P3 diesel generators, MPT was able to deliver high quality 15 MVA power station solutions to this remote area of the DRC. FG Wilson provides the mines with local service and warranty support from local FG Wilson dealers.
